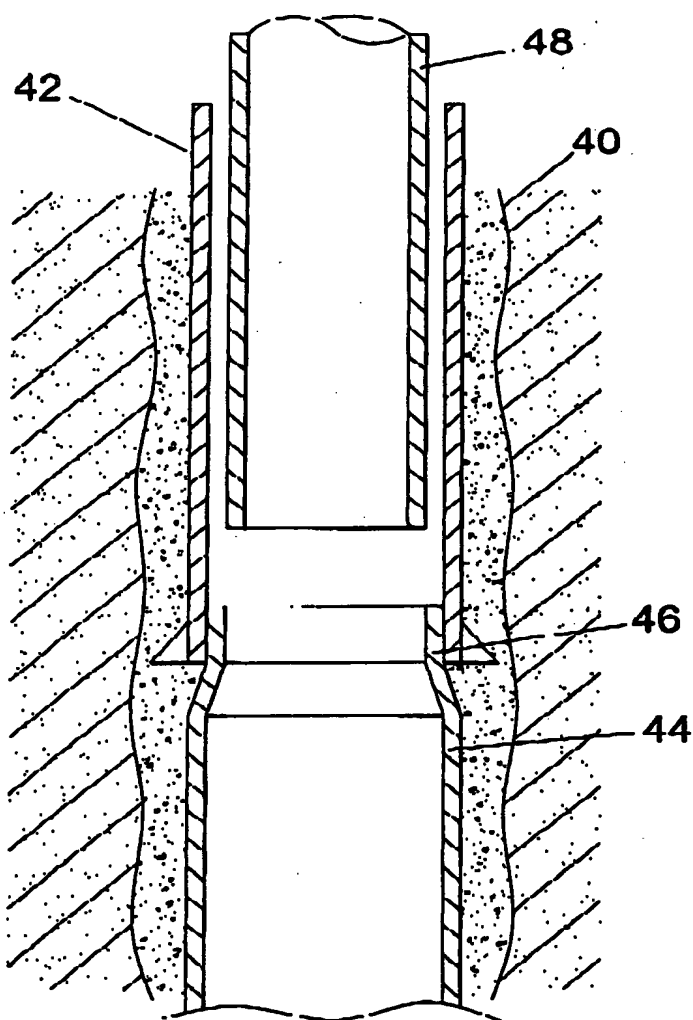

Fig. 4

A cross-sectional view of a wellbore completion assembly. The assembly includes a central tubular member (40) with a top flange (42). The tubular member is surrounded by a cement sheath (44). The cement sheath is formed by a cement slurry (46) that has hardened. The tubular member is secured to the cement sheath by a cement bond (48). The tubular member is also secured to the cement sheath by a cement bond (50).
